

Every US registry. One company database.

Coverage milestone, September 2026. Global Database now covers every US company registry: 109,567,346 company records from 53 US registries (50 states, DC, Puerto Rico and the US Virgin Islands): what is active, what each record carries, and where the public record runs out.

109.6M

57.4M

confirmed active

53

registries

Every US registry, one schema, every field attributed to its source

US COVERAGE SNAPSHOT · SEPTEMBER 2026

109.6 million US company records, 53 registries, one schema

109.6M

Company records

Every entity record we hold across 50 states, DC, Puerto Rico and the US Virgin Islands — active, dissolved and status-unknown.

64.6M

Active or status-unknown

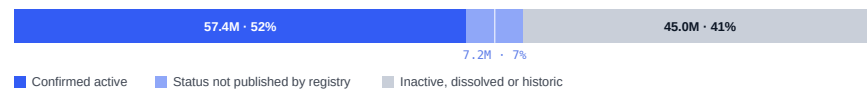

Records the registry marks active, plus records in registries that do not publish a status field for free.

57.4M

Confirmed active

Records where the registry itself reports the entity as active or in good standing.

How the 109.6M records break down

Source: Global Database US registry coverage snapshot, September 2026. Confirmed active = registry status reported as active or in good standing. 'Active or status-unknown' also includes entities in registries that do not publish status in the free public record (notably Delaware).

109.6 million records is the full file, including dissolved and historic entities kept for matching and audit. **64.6 million** are active or sit in registries that do not publish a status in the free record. **57.4 million** are confirmed active by the registry itself — the figure to put in front of a compliance buyer.

Company formation is a state function. There is no federal register, and since FinCEN's interim final rule of 26 March 2025 no domestic entity reports beneficial ownership. Coverage therefore has to be counted 53 times, and this report does.

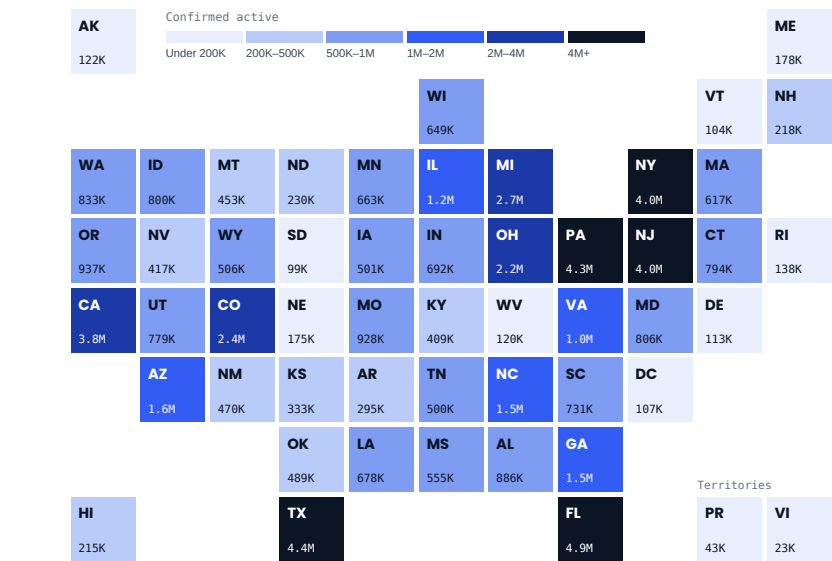

Field coverage across the active file: legal form 93% · formation date 82% · address 65% · officers 46% · NAICS 16% · website 9% · employee estimate 13% · turnover estimate 8%. Where a registry does not publish a field, the record returns it empty. Nothing is modelled to fill the gap.

Confirmed-active records by jurisdiction

STATE BY STATE · PICK A METRIC

Where the records are

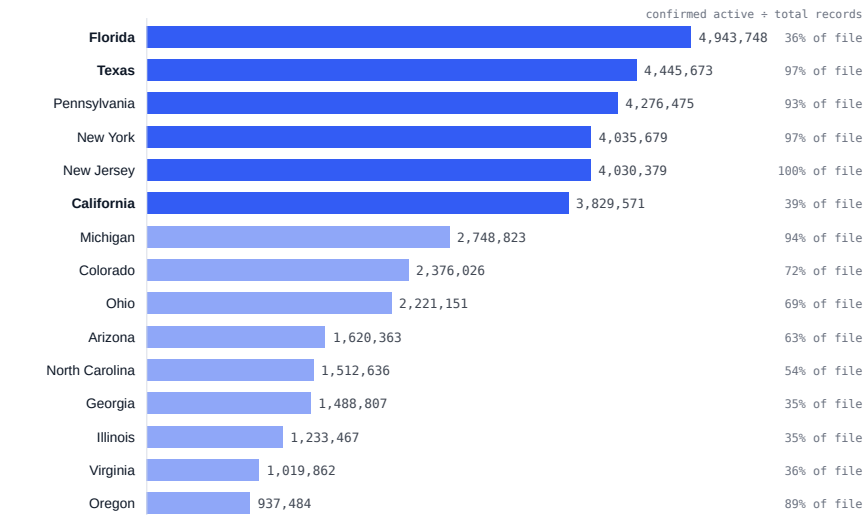

Each tile is one jurisdiction. Hover for the full record breakdown. Use the buttons above the map to switch metric.

Source: Global Database US registry coverage snapshot, September 2026. Percent metrics use the active-or-status-unknown count as denominator. Puerto Rico and the US Virgin Islands are held as separate registries.

ACTIVE COMPANIES ONLY · CONFIRMED ACTIVE BY THE REGISTRY

Active companies: the 15 largest states (40.7M of 57.4M confirmed active)

Source: Global Database US registry coverage snapshot, September 2026. Top 15 total 40,720,144 confirmed-active records (71% of the national confirmed-active count). Right-hand column shows what share of each state's full historic file is confirmed active.

Field coverage and identity depth

WHAT EACH RECORD CARRIES · NATIONAL TOTALS

Field coverage across the active US file

Bars show the number of records carrying each field. The denominator is the 64.6M active-or-status-unknown file; percentages are shown where the field is scoped to that file.

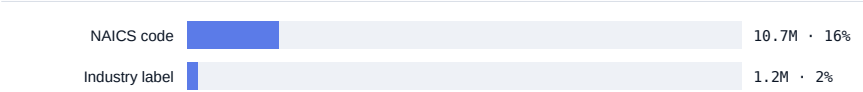

IDENTITY

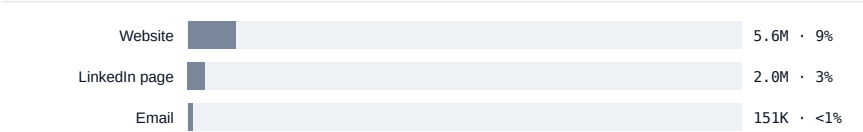

PEOPLE

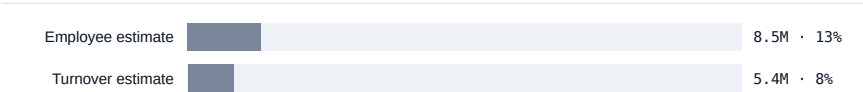

CLASSIFICATION

DIGITAL FOOTPRINT

SIZE (ESTIMATES)

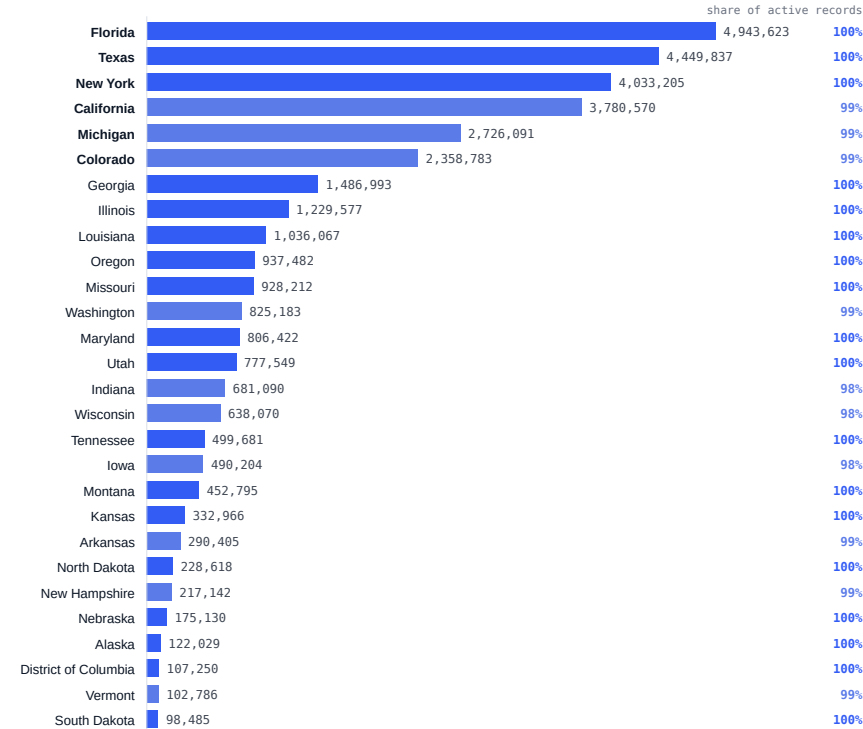

Source: Global Database US registry coverage snapshot, September 2026. Employee and turnover figures are estimate fields and are delivered labelled as estimates, separately from any filed value. Email coverage is intentionally minimal: registries do not publish it.

IDENTITY DEPTH · REGISTERED ADDRESS

28 registries deliver a full address on 97%+ of active records

Sorted by number of active-or-status-unknown records carrying a complete registered address. Together these 28 jurisdictions account for 34.8 million addressed records, out of 42.1 million nationally.

Source: Global Database US registry coverage snapshot, September 2026. Address = registered or principal address as published in the state filing; denominator is the state's active-or-status-unknown count. Deep blue marks registries at 99.5% or above.

TWO DIFFERENT QUESTIONS

Registry entities and 'small businesses' are not the same population

Registry counts are legal entities on file with the state. SBA counts include 29.8 million non-employer firms — mostly sole proprietors who never form an entity — and exclude dormant shells that remain on the register.

Where US registry data falls short, and how Global Database fills the gap

REGISTRY RECORD VS GLOBAL DATABASE RECORD

What Global Database adds beyond the state filing

	STATE REGISTRY PUBLISHES	GLOBAL DATABASE ADDS
Shareholders & UBOs	Not collected by any state registry. Domestic BOI reporting exempted March 2025.	Ownership resolved through foreign parents whose registries publish shareholders, plus SEC filings for public groups.
Financials	No filed accounts for private companies. Only Washington's Charities Program publishes figures, for registered charities.	SEC/EDGAR statements for listed companies. Labelled revenue and employee estimates for private ones.
Industry codes	NAICS on 16% of active records. Most states do not collect it at formation.	Industry tags on every resolved company, with the registry code kept where one exists.
Entity resolution & group structure	One legal entity per filing. Five state registrations are five unrelated records, and no state links a subsidiary to its parent.	Two layers: the same company resolved into one record across its state registrations, then mapped into its group structure of parents, subsidiaries and sister companies across 200+ countries.
Firmographics	Name, address, agent, officers, dates. No website, description or size.	Website, social profiles, description, employee and revenue estimates matched to the registry record.
Updates	A filing is published once. No notification when status, officers or the address change.	Perpetual updates: every record refreshed as its registry publishes, with alerts on status, officer and filing changes.

How to read the counts

- **Total records** — every entity record held, including dissolved, merged, revoked and historic.
- **Active + status unknown** — registry marks active, plus registries that publish no status in the free record (notably Delaware).
- **Confirmed active** — the registry itself reports the entity active or in good standing.
- **Field columns** — records carrying at least one value; populated only from the filing or an unambiguous match to it.
- **Estimates** — delivered in separately named estimate fields, never as filed figures.

Access

Master Data Bulk Feed (full-file and delta, refreshed quarterly) · REST API (verification, lookup, enrichment) · Web platform · MCP server for Claude and other AI agents. Every delivery carries the registry name and collection date on each field.
